

How will I learn?

1

IN CLASS

You will participate in lecture and take notes and ask lots of questions! Never be afraid to politely pause and ask questions. I can always slow down for you.

2

OUT OF CLASS

Every lecture will have an associated video resource in case you want to see a different example, need to go over something again, or missed class.

3

HANDS ON

Manipulatives will be provided when they are applicable to the concept! Believe it or not you can feel mathematics!

4

HOMEWORK

Problems will be assigned for you to work on. If you need help feel free to ask questions I will always be more than happy to help you tackle difficult problems.

5

MODELING

We will use modeling software to see what functions look and sound like. Math is everywhere so we should be able to experience it with all of our senses!

6

PROJECTS

What is math without application? You will actually figure out when you are ever going to use this in real life!
